

We require a total of 166 credits for graduation with no minor degree in other branch but you can complete minor degree offered by electrical branch in 166 credits.

We gained 20 credits in 1st sem 20 credits in 2nd sem 24 credits in 3rd sem 22 credits in 4th sem total 86 credits till the end of 2nd year

Now we require $166 - 86 = 80$ credits

Out of which 4 credits of Minor Project in 7th sem and 8 credits of Major Project in 8th sem 2 credits of Intern in 3rd year summer break total 14 credits

now, $80 - 14 = 66$ credits left

In 5th sem there will be 3 core subjects (core subjects means the subjects that are allotted to us by default. We don't have to elect them like the other electives) with total 15 credits The 4 core subjects are Power Electronics(4 credits), Power System Analysis(4 credit), Microprocessor and Microcontrollers Applications(4 Credits), Engineering Economics(3 credits)
Core subjects contribute 11 credits $66 - 15 = 51$ credits

In 6th sem there will be 3 core subjects (core subjects means the subjects that are allotted to us by default. We don't have to elect them like the other electives) with total 11 credits The 4 core subjects are Electric Drives(4 credits), Power System Control, Stability & Protection(4 credits), Fundamentals of Management (FOM) 3 credits
Core subjects contribute 11 credits $51 - 11 = 40$ credits

Now we have 40 credits remaining which can be only completed by general and departmental elective courses. You have to complete them by choosing 10 electives in upcoming 4 semesters such that 10×4 credits = 40 credits. It is suggested to keep your 8th sem elective or subject free for placements and internships, so it will be better if you gain all the credits by choosing all the 10 ECs (elective courses) in 5th, 6th, 7th sem.

You have to select 10 ECs out of you have to select minimum 6 DEC (Department Elective Courses) combinedly in 5,6,7th sem and 4 GECs (General Elective Courses)

Now, College allows MOOC courses (NPTEL Courses) for credit completion.

Here came the concept of MOOC course.

Sometimes the registration portal will show that the course is of 2 credits but it will be treated as of 4 credits automatically. You don't have to worry about it. Registration fee for MOOC course is 1000/- on NPTEL portal. It is easily available to all students unlike the elective courses.
Unlimited Seats hoti hai isme

If you take MOOC of our department, it will be treated as DEC (Our department will release the preferred MOOC list by itself) If you take MOOC of other department, it will be treated as GEC.

You can take only one MOOC in a semester and Total 3 MOOCs all over btech. MOOC is an easy course generally. It would be preferred to take MOOC in each semester.

Considering that you will get MOOC course as GEC/DEC easily in each semester. You have completed 12 credits (4 credits in each semester) You also have completed 3 DEC/GECs(Max Limit)

That means, $40 - 12 = 28$ credits left. You have to select 7 ECs in upcoming 3 semesters with DEC/GECs combined. .

For minor degree in any department other than Electrical, You have to get 6 DEC/GECs of that specific department under a certain bracket(will send list). IMO Don't go for this MINOR shit. Just avoid it(Masters krni hai toh hi sochna but itna matter ni krta upr se 2 subjects extra krne padhenge+GECs same branch ke milna is very tough)

Details of MOOC :- MOOC is generally a 12 week course. There will be no classes for it neither online nor offline. You will be given an assignment every week and you have to submit it regularly before deadline. Total 12 assignments will be submitted Out of 12 assignments, 8 assignments with best scores will be chosen.

The general evaluation criteria is given as :- 8 assignment x 10 marks each = 80 marks Out of 80 marks, you should score atleast 40 marks i.e. 50% And at last i.e. end of October or Starting of November, you have an MCQ based test at the exam centre allotted to you.(JEE wale centers hi milte hai). The centre will be out of DTU, But somewhere in Delhi. You have to score 50% marks in that MCQ based test also. If you failed to score 50% in assignment evaluation or MCQ test then MOOC completion will not be provided to you. Due to which you have a "BACK" OR "F" in your result. College will ask for your MOOC completion certificate if you fail to provide it or fill invalid details or submit fake certificate then "F" grade lagega in result.

You can take maximum 32 credits per semester including core and mooc and dec/gecs

By planning, you earned :

15 credits (core subjects) + 4 credits (MOOC) in 5th sem = 19

11 credits (core subjects) + 4 credits (MOOC) in 6th sem = 19

4 credits (MOOC) + 4 credits (Minor Project)+2 Credits Training Seminar(Intern) in 7th sem = 10

You already have 5 subjects in 5th sem, 4 in 6th, 2 in 7th sem And can select max 3 ECs in 5th sem, 4 in 6th, 6 in 7th accordingly so that you can complete 7 ECs other than MOOC. Plan by yourself that how much burden you can tolerate and choose the ECs as per your plan.

Preferred plan according to me

5th sem: 4 core+2 DEC+1 GEC(MOOC)

6th sem: 3 core+1 DEC(MOOC)+1 GEC+ 1 DEC

7th sem: 1 core+2 DEC+1 GEC(MOOC)+1 GEC

Hogyi BTech complete ab bas major project reh gaya 8th sem m

Electrical ke MOOC are tough atleast one or two weeks pehle padhna padhta hai except 1 or 2 subjects m voh btadunga jab list ayegi. GEC mooc are very easy same assignment se aate hai pure(Wildlife Ecology and Forest Management, Sustainable etc)

Also course registration portal is SHIT!!!!

Crash krjati hai site bhot zyada

Luck pe milenge subjects

First come first serve basis.

EVS milne se zyada mushkil hai DEC/GEC system lol

GECs m HU(Humanities) ke subjects bhi hote hai very easy to score kuch ni padhna and MBA(relatively tough than HU but not anywhere close to electrical ke subjects in toughness). But sabko chahiye hote hai toh nahi milte yeh+bots lagate hai log website pe toh subject drop mt krna yeh HU/MBA wale agar molgye bot uthalega automatically fir whatsapp groups pe bikenge voh subjects bhot expensive(YES BUSINESS HOTA HAI PURA YEH lol)
